

SELF-CLEANING OVENS

- **Clean in the self-cleaning cycle only the parts listed in this Use & Care Manual.** Before self-cleaning the oven, remove the broiler pan and any utensils or foods from the oven.
- **Do Not Use Oven Cleaners**—No commercial oven cleaner or oven liner protective coating of any kind should be used in or around any part of the oven.
- **Do Not Clean Door Gasket**—The door gasket is essential for a good seal. Care should be taken not to rub, damage or move the gasket.
- The health of some birds is extremely sensitive to the fumes given off during the self-cleaning cycle of any range. Move birds to another well-ventilated room.

IMPORTANT INSTRUCTIONS FOR CLEANING YOUR RANGE

- **Clean the range regularly to keep all parts free of grease that could catch fire.** Pay particular attention to the area around each surface element. Do not allow grease to accumulate.
- **Kitchen cleaners and aerosols—Always follow the manufacturer's recommended directions for use.** Be aware that excess residue from cleaners and aerosols may ignite causing damage and injury.
- **Clean ventilating hoods frequently—Grease should not be allowed to accumulate on the hood or filter.** Follow the manufacturer's instructions for cleaning hoods.

FOR CERAMIC-GLASS COOK TOP MODELS

- **Do not cook on broken cook top**—If cook top should break, cleaning solutions and spillovers may penetrate the broken cook top and create a risk of electric shock. Contact a qualified technician immediately.
- **Clean cook top with caution**—If a wet sponge or cloth is used to wipe spills on a hot cooking area, be careful to avoid a steam burn. Some cleaners can produce noxious fumes if applied to a hot surface.

IMPORTANT INSTRUCTIONS FOR USING YOUR COOKTOP

- **Know which knob controls each surface heating unit.** Place a pan of food on the unit before turning it on, and turn the unit off before removing the pan.
- **Use proper pan size**—This appliance is equipped with one or more surface units of different sizes. Select utensils having flat bottoms large enough to cover the surface unit heating element. The use of undersized utensils will expose a portion of the heating element to direct contact and may result in ignition of clothing. Proper relationship of utensil to element will also improve efficiency.
- **Utensil handles should be turned inward and not extend over adjacent surface elements**—To reduce the risk of burns, ignition of flammable materials, and spillage due to unintentional contact with the utensil, the handle of the utensil should be positioned so that it is turned inward, and does not extend over adjacent surface units.
- **Never leave surface elements unattended at high heat settings**—Boilovers cause smoking and greasy spillovers that may ignite, or a pan that has boiled dry may melt.
- **Do not immerse or soak removable heating elements**—Heating elements should never be immersed in water. Heating elements clean themselves during normal operation.
- **Glazed cooking utensils**—Only certain types of glass, glass/ceramic, ceramic, earthenware, or other glazed utensils are suitable for cook top service without breaking due to the sudden change in temperature. Check the manufacturer's recommendations for cook top use.
- **When flaming foods under a ventilating hood, turn the fan on.**

IMPORTANT SAFETY NOTICE

The California Safe Drinking Water and Toxic Enforcement Act requires the Governor of California to publish a list of substances known to the state to cause cancer, birth defects or other reproductive harm, and requires businesses to warn customers of potential exposure to such substances.

NOTE

The features shown for your appliance may vary according to model type & color.

Your electric range features include:

1. Electronic oven control with kitchen timer.
2. Interior oven light switch (some models).
3. Left front single (some models) or dual (some models) radiant element control.
4. Left rear single (some models) or dual (some models) radiant element control.
5. Right rear single (some models) or dual (some models) radiant element control.
6. Right front single (some models), dual (some models) radiant element control.
7. Element ON indicator light(s).
8. HOT SURFACE indicator light(s).
9. Oven interior light with removable cover.
10. Automatic oven door light switch (some models).
11. Self-cleaning oven interior.
12. Self-clean door latch.
13. Adjustable interior oven rack(s).
14. Large 1-piece oven door handle.
15. Full width oven door with window.
16. Storage drawer (some models) or lower cover panel (some models).
17. Easy to clean upswept cooktop.
18. Ceramic smoothtop (elements, styles and color will vary by model).
19. 6" single radiant element (some models).
20. 5-7" dual radiant element (some models).
21. 9" single radiant element (some models).
22. 6-9" dual radiant element (some models).
23. 12" single radiant element (some models).
24. Broil pan (some models).
25. Broil pan insert (some models).
26. Leveling legs and **anti-tip** bracket (included).

Note: Product features shown may vary from model to model.

Be sure to visit us online at www.frigidaire.com for a complete line of accessories.

Oven vent location

The oven vent is located **under the left side of the control panel** (See Fig. 1). When the oven is on, warm air passes through this vent. This venting is necessary for proper air circulation in the oven and good baking results. **Do not block the oven vent.**

oven vent location

Types of oven racks

Your range may be equipped with one or more of the oven rack styles shown.

Recommended rack positions by food type

Food type	Position
Broiling meats	See broil
Cookies, cakes, pies, biscuits & muffins	3 or 4
and casseroles	Frozen pies, angel food cake, yeast, bread 2 or 3
Small cuts of meat or poultry	2 or 3
Turkey, roast or ham	2

About the ceramic glass cooktop

The ceramic cooktop has radiant surface elements located below the surface of the glass. The design of the ceramic cooktop outlines the area of the surface element underneath. **Be sure** to match the pan size with the diameter of the element outline on the cooktop and only flat-bottomed cookware should be used.

The type and size of cookware, the number of surface elements in use and their settings are all factors that will affect the amount of heat that will spread to areas beyond the surface elements. The areas surrounding the elements may become **hot enough to cause burns**.

About the radiant surface elements

The element temperature rises gradually and evenly. As the temperature rises, the element will glow red. To maintain the selected setting the element will cycle ON and OFF. The heating element retains enough heat to provide a uniform and consistent heat during the off cycle.

For efficient cooking, turn OFF the element several minutes before cooking is complete. This will allow residual heat to complete the cooking process.

Element on & hot surface indicator lights

Your appliance is equipped with two different types of radiant surface control indicator lights that will glow on the control panel — the **on** indicator and the **hot surface** indicator lights.

The element **on** indicator light will glow when any surface element is turned ON. A quick glance at this indicator light after cooking is an easy check to be sure the surface controls are turned OFF (See Fig. 1).

The **hot surface** indicator light will glow when any surface cooking area heats up and will **remain on** until the glass cooktop has cooled to a **MODERATE** level (See Fig. 2).

element ON indicator light

Fig. 1

hot surface indicator light

Fig.

NOTES

Radiant elements have a limiter that allows the element to cycle ON and OFF, even at the HI setting. This helps to prevent damage to the ceramic smoothtop. Cycling at the HI setting is normal and will occur more often if the cookware is too small for the radiant element or if the cookware bottom is not flat.

Be sure to read the detailed instructions for ceramic glass cooktop cleaning in the **Care & Cleaning** and **Before You Call** checklist sections of this Use & Care Manual.

Types of cooktop elements

The ceramic glass cooktop has radiant surface elements located below the surface of the glass. The patterns on the ceramic glass will outline the size and type of element available. The **single** radiant element will have one round outline pattern shown. The **dual** radiant element is flexible because you may set just the smaller inner portion as a single element or both inner and outer portions can be set to heat together (See Fig. 1).

Fig. 1

Cookware material types

The cookware material determines how evenly and quickly heat is transferred from the surface element to the pan bottom. The most popular materials available are:

Aluminum - Excellent heat conductor. Some types of food will cause it to darken (Anodized aluminum cookware resists staining & pitting). If aluminum pans slide across the ceramic cooktop, they may leave metal marks which will resemble scratches. Remove these marks immediately.

Copper - Excellent heat conductor but discolors easily. May leave metal marks on ceramic glass (see Aluminum).

Stainless - Slow heat conductor with uneven cooking results. Is durable, easy to clean and resists staining.

Cast Iron - A slow heat conductor however will retain heat very well. Cooks evenly once cooking temperature is reached. Not recommended for use on ceramic cooktops.

Porcelain-enamel on metal - Heating characteristics will vary depending on base material. Porcelain-enamel coating must be smooth to avoid scratching ceramic cooktops.

Glass - Slow heat conductor. Not recommended for ceramic cooktop surfaces because it may scratch the glass.

Using proper cookware

The size and type of cookware used will influence the setting needed for best cooking results. Be sure to follow the recommendations for using proper cookware as illustrated in Figs. 2 & 3.

Cookware should have flat bottoms that make good contact with the entire surface heating element (See Fig. 2). Check for flatness by rotating a ruler across the bottom of the cookware (See Fig. 3). For more information about the ceramic cooktop see "Cooktop cleaning & maintenance" in the **Care & Cleaning** section.

Fig. 2

- ◆ Flat bottom and straight sides.
- ◆ Tight fitting lids.
- ◆ Weight of handle does not tilt pan. Pan is well balanced.
- ◆ Pan sizes match the amount of food to be prepared and the size of the surface element.
- ◆ Made of a material that conducts heat well.
- ◆ Easy to clean.
- ◆ Always matches element size.

- ◆ Cookware warped pan.
- ◆ Pan larger than cooking area marked on cooktop by more than one-half inch or 12mm.
- ◆ Heavy handle tilts pan.
- ◆ Pan is smaller or larger than heating area marked on cooktop.

Fig. 3

Single radiant surface elements (all models)

To operate the single radiant element:

1. Place correctly sized cookware on single radiant surface element.
2. Push in and turn the surface control knob in either direction (Fig. 2) to the desired setting (Refer to the **Suggested radiant surface element settings table** Fig. 1). Start most cooking operations on a higher setting and then turn to a lower setting to finish cooking. The surface control knobs do not have to be set exactly on a particular spot. Use the graphics provided as a guide and adjust the control knob as needed (See Fig. 2). Each surface element provides a constant amount of heat at each setting. A glowing red surface heating area extending beyond the bottom edge of the cookware indicates the cookware is **too**

small for the surface heating area.

3. When cooking is complete, turn the radiant surface element OFF before removing the cookware.

Suggested radiant surface element settings

The suggested settings found in Fig.1 below are based when cooking with medium-weight aluminum pans with lids. Settings may vary when using other types of pans.

Suggested settings for single and dual radiant elements table

Settings	Type of cooking
High (HI - 9)	Start most foods, bring water to a boil, pan broiling
Medium high (7 - 8)	Continue a rapid boil, fry, deep fat fry
Medium (5 - 6)	Maintain a slow boil, thicken sauces and gravies or steam vegetables
Medium Low (2 - 4)	Keep foods cooking, poach, stew
Low (LO - 1)	Keep warm, melt, simmer

Fig. 1

Fig. 2

CAUTION

Radiant surface elements may appear to have cooled after they have been turned off. **The glass surface may still be hot** and burns may occur if the glass surface is touched before it has cooled sufficiently.

Do not place flammable items such as plastic salt and pepper shakers, spoon holders or plastic wrappings on top of the range when it is in use. These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

IMPORTANT

Do not allow aluminum foil, or ANY material that can melt to make contact with the ceramic glass cooktop. If these items melt on the cooktop they will damage the ceramic cooktop.

NOTES

The size and type of utensil used, and the amount and type of food being cooked will influence the setting needed for best cooking results.

The **on** indicator light will glow when one or more elements are turned ON. A quick glance at this indicator light when cooking is finished is an easy check to be sure all control knobs are turned OFF. The **hot surface** indicator light will continue to glow AFTER the control knob is turned to the "OFF" position and will glow until the heating surface area has cooled sufficiently.

Dual radiant surface elements (some models)

Symbols on the backguard are used to indicate which coil of the dual radiant element will heat. The ○ symbol indicates the inner coil only. The ⊙ symbol indicates both inner and outer coils will heat.

To operate a dual radiant element:

1. Place correctly sized cookware on dual radiant surface element.
2. Push in and turn the surface control knob clockwise to begin heating both the inner and outer portions of the dual element. If only the inner heating portion is needed like for smaller cookware, push in and turn the knob counter-clockwise to start.
3. When cooking is complete, turn the dual radiant surface element OFF before removing the cookware.

Start most cooking operations on a higher setting and then turn to a lower setting to finish cooking. The surface control knobs do not have to be set exactly on a particular mark. Use the marks as a guide and adjust the control knob as needed. A glowing red surface heating area extending beyond the bottom edge of the cookware indicates the cookware is **too small** for the surface heating area.

You may switch from either coil setting at any time during cooking. See **Suggested radiant surface element settings table** on previous page.

CAUTION

Radiant surface elements may appear to have cooled after they have been turned off. **The glass surface may still be hot** and burns may occur if the glass surface is touched before it has cooled sufficiently.

Do not place flammable items such as plastic salt and pepper shakers, spoon holders or plastic wrappings on top of the range when it is in use. These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

IMPORTANT

Do not allow aluminum foil, or ANY material that can melt to make contact with the ceramic glass cooktop. If these items melt on the cooktop they will damage the ceramic cooktop.

Areas that heat are shown

darkened.

Fig. 1

Fig. 2

NOTES

The size and type of utensil used, and the amount and type of food being cooked will influence the setting needed for best cooking results.

The **on** indicator light will glow when one or more elements are turned ON. A quick glance at this indicator light when cooking is finished is an easy check to be sure all control knobs are turned OFF. The **hot surface** indicator light will continue to glow AFTER the control knob is turned to the "OFF" position and will glow until the heating surface area has cooled sufficiently.

Home Canning

Be sure to read and observe all the following points when home canning with your appliance. Check with the USDA (United States Department of Agriculture) website and be sure to read all the information they have available as well as follow their recommendations for home canning procedures.

- Use only quality flat bottom canners when home canning. Use a straight-edge to check canner bottom (see "Cookware material types" in the **Before setting surface controls** section).
- Use only a **completely flat bottom canner** with no ridges that radiate from the bottom center when home canning using a ceramic cooktop.
- **Make sure the diameter of the canner does not exceed 1 inch beyond the surface element markings or burner.** It is recommended to use smaller diameter canners on electric coil and ceramic glass cooktops.
- Start with hot tap water to bring water to boil more quickly.
- Use the highest heat setting when first bringing the water to a boil. Once boiling is achieved, reduce heat to lowest possible setting to maintain that boil.

IMPORTANT

NEVER place or straddle a cooking utensil over 2 different surface cooking areas at the same time. This may cause the ceramic cooktop to fracture.

CAUTION

Radiant surface elements may appear to have cooled after they have been turned off. **The glass surface may still be hot** and burns may occur if the glass surface is touched before it has cooled sufficiently.

Do not place flammable items such as plastic salt and pepper shakers, spoon holders or plastic wrappings on top of the range when it is in use. These items could melt or ignite. Potholders, towels or wooden spoons could catch fire if placed too close to the surface elements.

IMPORTANT

Do not allow aluminum foil, or ANY material that can melt to make contact with the ceramic glass cooktop. If these items melt on the cooktop they will damage the ceramic cooktop.

READ THE INSTRUCTIONS CAREFULLY BEFORE USING THE OVEN.

For satisfactory use of your oven, become familiar with the various pad features and functions of the oven as described below.

Feature indicator lights— These indicator lights show which feature is active.

Bake time pad— Use to enter the length of baking time desired.

Up and down arrow pads— Use with the feature or function pads to set oven temperature, bake time, start time, clean time (when programming an automatic start time), setting or adjusting the clock and minute timer.

Bake pad—Use to select the bake feature.

Clock pad— Use to set the time of day.

Timer on-off pad— Use to set or cancel the minute timer. The minute timer does not start or stop cooking. **Timer on-off pad** is used to set the continuous bake function.

Broil pad— Use to select the variable broil feature.

Start time pad— Use to set the desired start time for baking & Self-Clean. May be used with **bake time** to program a delayed timed bake.

Oven, preheat & door locked lights* — The "oven" light will glow each time the oven turns on to maintain the set oven temperature. The "preheat" light will glow when the oven is first set to operate, or if the desired temperature is reset higher than the actual oven temperature. The "door locked" light will flash when the oven door locks and unlocks, the oven door lockout is active or when the self-clean cycle feature is active.

Clean pad— Use to set a Self-Clean cycle.

Clear off pad— Use to clear any feature previously entered except the time of day and minute timer. Press **clear off** to stop cooking. Also use **clear off** to activate oven lockout feature.

SETTING OVEN CONTROLS

Setting the clock

When the appliance is first plugged in or when the power supply to the appliance has been interrupted, the display will flash "12:00". It is recommended to always set the clock for the correct time of day before using the appliance.

To set the clock:

1. Press **clock** once (do not hold key pad down).
2. Within 5 seconds, press and hold the **^** or **v** until the correct time of day appears in the display.

NOTE

The clock cannot be changed when the oven is set for **cooking** or **clean** is active.

Changing temperature display (°F or °C)

The electronic oven control is set to display °F (Fahrenheit) when shipped from the factory. The oven may be programmed for any temperature from 170°F to 550°F (77°C to 287°C).

NOTE

The temperature display feature cannot be changed when the oven is set for **cooking** or **clean** is active.

To change the temperature to display °C (Celsius) or from °C to °F:

1. Press **broil**. "—" appears in the display.
2. Press and hold the **^** until "HI" appears in the display.
3. Press and hold **broil** until °F or °C appears in the display.
4. Press the **^** or **v** to change °F to °C or °C to °F.
5. Press any control pad to return to normal operating mode.

Setting a silent control panel

When choosing a function, a tone will be heard each time a keypad is pressed. If desired, the control can be programmed for silent operation.

To block the controls from sounding when any keypad is pressed in the future, press and hold **start time** keypad for 6 seconds. The control will beep once then release the keypad.

To return the tones, press and hold **start time** again for 6 seconds until the control beeps once.

Setting the minute timer

1. Press **timer on-off**.
2. Press the **▲** to increase the time in one minute increments. Press and hold the **▲** to increase the time in 10 minute increments. The timer can be set for any amount of time from 1 minute to 11 hours and 59 minutes.

Note: If the **▼** pad is pressed first, the timer will advance to 11 hours and 59 minutes.

3. When the set time has run out, the timer will beep 3 times and will continue to beep 3 times every 60 seconds until **timer on-off** is pressed.

To change the timer while it is in use

While the timer is active and shows in the display, press and hold the **▲** or **▼** to increase or decrease the time remaining.

To cancel the minute timer before the set time has run out

Press **timer on-off** once .

NOTES

- The indicator light located above the **timer on-off** pad will glow while the minute timer is active.
- The minute timer will display hours and minutes until 1 hour remains on the timer. Once less than 1 hour remains, the display will count down in minutes and seconds. Once the timer has less than 1 minute remaining only seconds will display.
- The minute timer **will not** start or stop the cooking process. It serves as an extra timer in the kitchen that will beep when the set time has run out. The minute timer can be used alone or while using any of the other oven features. If another feature is active when the minute timer is active, the minute timer will show in the display. To view information about other active features, press the pad for that feature.

Changing between continuous bake setting or 12-Hour Energy Saving feature

The oven control has a built-in 12-Hour Energy Saving feature that will shut off the oven if the oven is left on for more than 12 hours. The oven control can be programmed to override this feature for continuous baking.

Changing to continuous bake setting:

1. Press and hold **timer on-off** down for 6 seconds until a tone sounds. " — — hr" will appear in display for continuous cooking. The current time of day will return to the display.
2. To cancel the continuous bake setting, press **timer on-off** and hold for 6 seconds until a tone sounds. "12hr" will appear in display indicating that the control has returned to the 12-Hour Energy Saving feature.

 **IMPORTANT**

This feature does not change how the cooktop controls operate.

Setting bake

The oven can be programmed to bake at any temperature from 170°F to 550°F (77°C to 287°C). The factory preset automatic bake temperature is 350°F (177°C).

To set bake

1. Press **bake**. “— — —” appears in the display.
2. Within 5 seconds, press the **^** or **v**. The display will show “350°F (177°C).” By pressing and holding the **^** or **v**, the temperature can then be adjusted in 5°F increments (1°C if the control is set to display Celsius).
3. As soon as the **^** or **v** pad is released, the oven will begin heating to the selected temperature. When the displayed temperature reaches the desired baking temperature, the preheat indicator light will turn OFF and the control will beep 3 times.

To change the oven temperature after bake has started

1. Press **bake**. Visually check the bake temperature and that it needs to be changed.
2. Press the **^** or **v** pad to increase or decrease the set temperature to the desired new oven temperature.

 **NOTES**

- The **oven** indicator light on the electronic display will turn ON and OFF when using the Bake feature and during preheat. This is normal and indicates that the oven is cycling to maintain the selected baking temperature.
- When the **preheat** indicator light turns OFF, your oven is ready.
- To cancel baking at any time, press **clear off**.

Setting bake time

The **bake time** pad sets the amount of time needed for baking. The oven will turn on immediately and stop automatically after the set bake time ends.

 **WARNING**

FOOD POISONING HAZARD. Do not let food sit for more than one hour before or after cooking. Doing so can result in food poisoning or sickness.

 **CAUTION**

Use caution with the timed bake and delayed timed bake features. Foods that can easily spoil such as milk, eggs, fish, meat or poultry, should be chilled in the refrigerator first. Even when chilled, they should not stand in the oven for more than 1 hour before cooking begins, and should be removed promptly when cooking is finished.

To program the oven to begin baking immediately and to shut off automatically (timed bake)

1. Be sure that the clock shows the correct time of day.
2. Place the food in the oven.
3. Press **bake**. “— — — °” appears in the display.
4. Within 5 seconds, press the **^** or **v**. The display will show “350°F (177°C).” By holding the **^** or **v**, the temperature can then be adjusted in 5°F increments (1°C if the control is set to display Celsius).
5. Press **bake time**. “:00” will appear in the display.
6. Press the **^** or **v** until the desired baking time appears in the display.
7. The oven will turn ON and begin heating.

 **NOTES**

Dark or dull pans absorb more heat than shiny bake-ware resulting in dark or overbrowning of foods. It may be necessary to reduce the oven temperature or cook time to prevent overbrowning of some foods. Dark pans are recommended for pies. Shiny pans are recommended for cakes, cookies and muffins.

- Bake time will not operate when using the broil feature.
- To cancel baking at any time, press **clear off**.

Setting bake time and start time

The **bake time** and **start time** pads may be used to set the length of baking time and to delay the starting time (delayed timed bake). The oven will turn on at a later time and stop automatically after the set bake time ends.

To program oven for a delayed start time and to shut-off automatically

1. Be sure that the clock displays the correct time of day.
2. Place food in the oven.
3. Press **bake**. " — — — ° " appears in the display.
4. Within 5 seconds, press the **▲** or **▼**. The display will show "350°F (177°C)." By holding the **▲** or **▼**, the temperature can then be adjusted in 5°F increments (1°C if the control is set to display Celsius).
5. Press **bake time**. ":00" will appear in the display.
6. Press the **▲** or **▼** until the desired baking time appears.
7. Press **start time**. The time of day will appear in the display.
8. Press the **▲** or **▼** until the desired start time appears in the display.
9. Once the controls are set, the control calculates the time when baking will stop.
10. The oven will turn ON at the delayed start time and begin heating. The oven will turn OFF after the set bake time ends.

When the set bake time runs out

1. "End" will appear in the display window and the oven will shut-off automatically.
2. The control will beep 3 times every 60 seconds as a reminder until **clear off** is pressed.

To change the oven temperature or bake time after baking has started

1. Press the function pad you want to change.
2. Press the **▲** or **▼** to adjust the setting.

WARNING

FOOD POISONING HAZARD. Do not let food sit for more than one hour before or after cooking. Doing so can result in food poisoning or sickness.

CAUTION

Use caution with the timed bake and delayed timed bake features. Foods that can easily spoil such as milk, eggs, fish, meat or poultry, should be chilled in the refrigerator first. Even when chilled, they should not stand in the oven for more than 1 hour before cooking begins, and should be removed promptly when cooking is completed.

IMPORTANT

Dark or dull pans absorb more heat than shiny bakeware resulting in dark or overbrowning of foods. It may be necessary to reduce the oven temperature or cook time to prevent overbrowning of some foods. Dark pans are recommended for pies. Shiny pans are recommended for cakes, cookies and muffins.

NOTE

During a delayed timed bake the preheat indicator light will not function until the set time to start cooking is reached.

Setting broil

Use the broil feature to cook meats that require direct exposure to radiant heat for optimum browning results. When broiling always remember to arrange the oven racks while oven is still cool. Position the rack as suggested in the **broil settings table** (See Figs. 1 & 3).

To set Broil

1. Arrange the oven rack while oven is still cool.
2. Press **broil**. " — — " will appear in display.
3. Press and hold the **▲** or **▼** until the desired broil setting level appears in the display. Press the **▲** for **HI** broil or the **▼** for **LO** broil. Most foods may be broiled at the **HI** broil setting. Select the **LO** broil setting to avoid excess browning or drying of foods that should be cooked to the well-done stage.
4. **For optimum results, preheat oven for 5 minutes before adding food.**
5. Place the insert on the broil pan (if equipped), then place the food on the broil pan insert (if equipped).
6. Place the broiler pan and insert on the oven rack (See Figs. 1 & 2).
7. **Open the oven door** to the broil stop position when broiling.
8. Broil on one side until food is browned. Turn and broil food on 2nd side.
9. When broiling is finished press **clear off**.

NOTE

Always pull the oven rack out to the stop position before turning or removing the food.

Fig. 1

Fig. 2

WARNING

Should an oven fire occur, close the oven door and turn the oven OFF. If the fire continues, use a fire extinguisher. **DO NOT** put water or flour on the fire. Flour may be explosive.

CAUTION

- The broiler pan and the insert (some models) allows grease to drain and be kept away from the high heat of the broiler. **DO NOT** use the pan without the insert. **DO NOT** cover the insert with **aluminum foil**; the exposed grease could ignite.
- To insure proper results when broiling use ONLY Electrolux Home Products, Inc. approved broil pan & insert.

Suggested broil settings table (electric oven)

Food	Rack position	Setting	Cook time in minutes		Doneness
			1st side	2nd side	
Steak 1" thick	6th or 7th*	Hi	6	4	Medium
Steak 1" thick	6th or 7th*	Hi	7	5	Medium-well
Steak 1" thick	6th or 7th*	Hi	8	7	Well
Pork chops 3/4" thick	6th	Hi	8	6	Well
Chicken-bone in	5th	Lo	20	10	Well
Chicken-boneless	6th	Lo	8	6	Well
Fish	6th	Hi	13	n/a	Well
Shrimp	5th	Hi	5	n/a	Well
Hamburger 1" thick	7th*	Hi	9	7	Medium
Hamburger 1" thick	6th	Hi	10	8	Well

Fig. 3

*Use the off-set rack if you choose to use oven rack position 7.

Adjusting the oven temperature

Your appliance has been factory calibrated and tested to ensure an accurate baking temperature. For the first few uses, follow your recipe times and temperature recommendations carefully. If you think the oven is cooking too hot or too cool for your recipe times, you can adjust the control so the oven cooks hotter or cooler than the temperature displayed.

To adjust oven temperature:

1. Press **bake**.
2. Set the temperature to 550°F (287°C) by pressing and holding the **▲**.
3. Within 2 seconds, press and hold **bake** until numeric digit(s) appear. Release **bake** keypad. The display now indicates the amount of degrees offset between the original factory temperature setting and the current temperature setting. If the oven control has the original factory calibration, the display will read "0."
4. The temperature can now be adjusted up or down 35°F (19°C), in 5°F increments by pressing and holding the **▲** or **▼**. Adjust until the desired amount of offset appears in the display. When lowering the oven temperature, a minus sign (-) will appear before the number to indicate that the oven will be cooler by the displayed amount of degrees.
5. When you have made the desired adjustment, press **clear off** to go back to the time of day display.

NOTES

Oven temperature adjustments made will not affect the broil or self-cleaning feature temperatures.

If the display is set for Celsius, adjustments made will be in 1°C increments each press of the **▲** or **▼** keys.

DO NOT USE oven thermometers such as those found in grocery stores to check the temperature settings inside your oven. These oven thermometers may vary as much as 20 to 40 degrees from actual temperatures.

Setting oven lockout

The control can be programmed to lock the oven door and lockout the oven control pads.

To set the oven lockout feature

1. Press **clear off** and hold for 3 seconds. "**Loc**" will appear in display, the "Door Locked" indicator light will flash and the motor driven door lock will begin to close automatically. **Allow about 15 seconds** for the oven door to lock. Once the oven door is locked, the current time of day will appear in the display.
2. To cancel the Oven Lockout feature, press **clear off** and hold for 3 seconds. The control will unlock the oven door and resume normal operation.

NOTES

DO NOT open the oven door while the indicator light is flashing. Allow about 15 seconds for the oven door to lock. Once the oven door is locked, the current time of day will appear in the display.

If any control pad is pressed with the oven lockout feature active, "**Loc**" will appear in the display until the control pad is released.

Operating oven light (some models)

The interior oven light will automatically turn ON when the oven door is opened. Press the oven light switch located on the upper left control panel to turn the interior oven light ON and OFF whenever the oven door is closed.

The interior oven light is located at the upper left rear wall of the oven interior and is covered with a glass shield held by a wire holder. The glass shield must be in place whenever the oven is in use. To change the interior oven light, see "Changing the oven light" in the **Care & Cleaning** section.

oven light switch

Self-Cleaning

A self-cleaning oven cleans itself with high temperatures (well above normal cooking temperatures) which eliminate soils completely or reduces them to a fine powdered ash you can wipe away with a damp cloth.

➔ IMPORTANT

Adhere to the following self-clean precautions:

- **DO NOT** use oven cleaners or oven protective coatings in or around any part of the oven interior.
- **DO NOT** clean the oven door gasket (See Fig. 1). The woven material of the oven door gasket is essential for a good seal. Care should be taken not to rub, damage or remove the gasket.
- **DO NOT** use any cleaning materials on the oven door gasket. Doing so could cause damage.
- **Remove the broiler pan and insert, all utensils and ANY ALUMINUM FOIL. These items cannot withstand high cleaning temperatures and will melt.**
- **Completely remove ALL OVEN RACKS and ANY ACCESSORIES. If the oven racks are not removed they will lose their special coating properties and no longer slide in and out of the oven cavity easily.**
- **Remove any excessive spillovers.** Any spills on the oven bottom should be wiped-up and removed **before** starting the self-cleaning cycle. To clean, use hot, soapy water and a cloth. Large spillovers can cause heavy smoke or fire when subjected to high temperatures. **DO NOT** allow food spills with a high sugar or acid content (such as milk, tomatoes, sauerkraut, fruit juices or pie filling) to remain on the surface as they may leave a dull spot even after cleaning.
- Clean any soil from the oven frame, the door liner outside the oven door gasket and the small area at the front center of the oven bottom. These areas heat sufficiently to burn soil on. Clean with soap and water. These areas are shown in white (See Fig. 1).

⚠ CAUTION

During the self-cleaning cycle, the outside of the range can become very hot to the touch. **DO NOT** leave small children unattended near the appliance.

The health of some birds is extremely sensitive to the fumes given off during the self-cleaning cycle of any range. Move birds to another well-ventilated room.

DO NOT force the oven door open. This can damage the automatic door locking system. Use caution when opening the door after the self-cleaning cycle is complete. The oven may still be **VERY HOT**.

Fig. 1

⚠ CAUTION

The oven bake and broil elements may appear to have cooled after they have been turned OFF. **The elements may still be hot** and burns may occur if these elements are touched before they have cooled sufficiently.

➔ IMPORTANT

202 West 2nd St

element ONLY - This bake element was designed to be tilted up using your hand from the front of the bake element for cleaning purposes. Remove the bottom oven rack before raising the element. Do not to raise the element more than 4 or 5 inches from the resting position.

Frigidaire Stove/Oven Manual

Setting a self-clean cycle or a delayed start self-clean cycle

IMPORTANT

To start a self-clean cycle immediately without a **delay**, skip steps 2 & 3 in the instructions provided below.

Setting a self-clean cycle

1. Be sure the clock displays the correct time of day.
2. Press **start time**. The " : " in the time of day will flash.
3. Press and hold the  pad to scroll to the time to start the delayed Self-Clean cycle. Release the pad when the desired time is displayed.
4. Press **clean**. "---" appears in the display.
5. Press the  or  pad once. "3:00" will appear in the display indicating that a 3 hour self-clean time is set. To change to a 2 hour self-clean time press  once (2:00 appears in the display).
(Some models) For a 4 hour self-clean time press  until (4:00 appears in display).
6. "CLn" will appear in the display during the self-clean cycle and the "LOCK" light will glow until the self-cleaning cycle is complete or cancelled and the oven temperature has cooled.

NOTE

As soon as the controls are set, the motor driven lock will begin to close automatically and the "LOCK" indicator light will flash. **DO NOT** open the oven door while the light is flashing (allow about 15 seconds for the oven door to lock).

When the self-clean cycle has completed:

1. The time of day will appear in the display window and the "Clean" and "LOCK" light will continue to glow.
2. Once the oven has cooled down for about 1 HOUR and the "LOCK" light has gone out, the oven door can be opened.

Stopping or interrupting a self-clean cycle If it becomes necessary to stop or interrupt a self-cleaning cycle once it has been activated:

1. Press **clear off**.
2. Once the oven has cooled down for about 1 HOUR and the "LOCK" light has turned off, the oven door can be opened.
3. Restart the self-clean cycle once all conditions have been corrected.

CAUTION

To avoid possible burns use care when opening the oven door after the self-cleaning cycle. **Stand to the side of the oven** when opening the door to allow hot air or steam to escape.

DO NOT force the oven door open. This can damage the automatic door locking system. Use caution and avoid possible burns when opening the door after the self-cleaning cycle has completed. The oven may still be **VERY HOT**.

NOTES

Whenever the self-clean feature is active you may check the amount of time remaining in the self-clean cycle by pressing the **clean** pad. Remember the range door cannot be opened until the range has cooled sufficiently. You will need to **add about 1 hour to the time** displayed before you can use the range for cooking.

When the oven is cool, wipe away any residue or powdered ash with a damp cloth or paper towel.

Cleaning recommendation table

Surface type	Recommendation
<ul style="list-style-type: none"> • Control knobs • Painted body parts • Painted decorative trim • Aluminum, plastic or vinyl trim pieces 	<p>Use hot, soapy water and a cloth. Dry with a clean cloth.</p> <p>For general cleaning, use hot, soapy water and a cloth. For more difficult soils and built-up grease, apply a liquid detergent directly onto the soil. Leave on soil for 30 to 60 minutes. Rinse with a damp cloth and dry. Do not use abrasive cleaners on any of these materials; they can scratch. To remove control knobs, turn to the OFF position; grasp firmly and pull straight off the shaft. To replace knobs after cleaning, line up the flat sides of both the knob and the shaft; then push the knob into place.</p>
<ul style="list-style-type: none"> • Control panel • Decorative trim (some models) 	<p>Before cleaning the control panel, turn all controls OFF and if needed remove any knobs from the panel. Clean using hot, soapy water and a dishcloth. Be sure to squeeze excess water from the dishcloth before wiping the control panel; especially when wiping around the controls area. Excess water in or around the controls may cause damage to the appliance. When rinsing, use clean water and a dishcloth and be sure to squeeze excess water from dishcloth before wiping the control panel.</p>
<ul style="list-style-type: none"> • Stainless steel (some models) 	<p>Clean heavier soils with hot, soapy water and a dishcloth. Rinse with clean water and a cloth. Do not use cleaners with high concentrations of chlorides or chlorine. Do not use harsh scrubbing cleaners. Only use kitchen cleaners that are especially made for cleaning stainless steel. Always be sure to rinse the cleaners off from the surface as bluish stains may occur during heating that cannot be removed.</p>
<ul style="list-style-type: none"> • Porcelain enamel broiler pan and broiler pan insert (if equipped) • Door liner & body parts 	<p>Gentle scouring with a soapy non-abrasive scouring pad will remove most spots. Rinse with a 1:1 solution of clear water and ammonia. If necessary, cover difficult spots with an ammonia-soaked paper towel for 30 to 40 minutes. Rinse with clean water and a damp cloth, and then scrub with a soap-filled non-abrasive scouring pad. Rinse and wipe dry with a clean cloth. Remove all cleaners or the porcelain may become damaged during future heating.</p>
<ul style="list-style-type: none"> • Oven racks 	<p>Oven racks must be removed from oven cavity. Clean by using a mild, abrasive cleaner following manufacturer’s instructions. Rinse with clean water and dry.</p>
<ul style="list-style-type: none"> • Oven door 	<p>Use soap & water to thoroughly clean the top, sides and front of the oven door. Rinse well. You may use a glass cleaner on the outside glass of the oven door. Do not immerse the door in water. Do not spray or allow water or the glass cleaner to enter the door vents. Do not use oven cleaners, cleaning powders or any harsh abrasive cleaning materials on the outside of the oven door.</p> <p>Do not clean the oven door gasket. On self-cleaning models the oven door gasket is made of a woven material which is essential for a good seal. Care should be taken not to rub, damage or remove this gasket.</p>
<ul style="list-style-type: none"> • Ceramic cooktop 	<p>Do not use spray oven cleaners on the cooktop. See cooktop cleaning and maintenance in the Care & Cleaning section.</p>

Cooktop maintenance

➔ IMPORTANT

Consistent and proper cleaning is essential to maintaining your ceramic glass cooktop.

Prior to using your cooktop for the first time, apply a ceramic cooktop cleaning cream (available in most hardware, grocery and department stores) to the ceramic surface. Clean and buff with a clean paper towel. This will make cleaning easier when soiled from cooking. Cooktop cleaning creams leave a protective finish on the glass to help prevent scratches and abrasions.

Sliding aluminum or copper clad bottom pans on the cooktop can cause metal markings on the cooktop surface. These marks should be removed **immediately** after the cooktop has cooled using the cooktop cleaning cream. Metal marks can become permanent if not removed prior to future use.

Cookware (cast iron, metal, ceramic or glass) with rough or dirty bottoms can **mark or scratch** the cooktop surface.

Do not:

- Slide anything metal or glass across the cooktop.
- Use cookware with dirt or dirt build up on bottom; replace with clean cookware before using.
- Use your cooktop as a cutting board or work surface in the kitchen.
- Cook foods directly on the cooktop surface without a pan.
- Drop heavy or hard objects on the ceramic glass cooktop, they may cause it to crack.

Cooktop cleaning

⚠ CAUTION

Before cleaning the cooktop, be sure the controls are turned to OFF and the cooktop is COOL.

For light to moderate soil:

Apply a few drops of cooktop cleaning cream directly to the cooktop. Use a clean paper towel to clean the entire cooktop surface. Make sure the cooktop is cleaned thoroughly, leaving no residue. Do not use the towel you use to clean the cooktop for any other purpose.

For heavy, burned on soil:

Apply a few drops of glass-ceramic cooktop cleaner directly to the soiled area. Rub the soiled area using a non-abrasive plastic type no-scratch cleaning pad, applying pressure as needed. Do not use the pad you use to clean the cooktop for any other purpose.

If soils remain, carefully scrape soils with a metal razor blade scraper, holding scraper at a 30 degree angle to the surface. Remove loosened soils with cooktop cleaning cream and buff surface clean.

Cooktop cleaning (cont'd)

Plastic or foods with a high sugar content: These types of soils need be removed immediately if spilled or melted onto the ceramic cooktop surface. Permanent damage (such as pitting of the cooktop surface) may occur if not removed **immediately**.

After turning the surface elements OFF, use a razor blade scraper or a metal spatula with a mitt and scrape the soil from the hot surface (as illustrated). Allow the cooktop to cool, and use the same method for heavy or burned on soils.

WARNING

DO NOT use a cooktop cleaner on a hot cooktop. The fumes can be hazardous to your health and can chemically damage the ceramic glass surface.

Do not use the following on the cooktop:

- Do not use abrasive cleaners and scouring pads, such as metal and some nylon pads. They may scratch the cooktop, making it more difficult to clean.
- Do not use harsh cleaners, such as chlorine bleach, ammonia or oven cleaners, as they may etch or discolor the cooktop.
- Do not use dirty sponges, cloths or paper towels, as they can leave soil or lint on the cooktop which can burn and cause discoloration.

IMPORTANT

Damage to the ceramic glass cooktop may occur if you use an abrasive type cleaning pad. Only use cleaning products that have been specifically designed for ceramic glass cooktops.

Caution for aluminum use on the cooktop

- **Aluminum Foil** - Use of aluminum foil on a hot cooktop will damage the ceramic cooktop. Do not use thin aluminum cooking utensils or allow aluminum foil to touch the ceramic cooktop under ANY circumstances.
- **Aluminum utensils** - The melting point of aluminum is much lower than that of other metals. Care must be taken when aluminum pots or pans are used on the cooktop. If aluminum pans are allowed to boil dry when using the cooktop, not only will the utensil be damaged or destroyed, but it may fuse to, break or mark the ceramic glass surface, permanently damaging the cooktop surface.

Replacing the oven light

The light bulb is located at the rear of the oven and is covered with a glass shield held by a wire holder. The glass shield must be in place whenever the oven is in use.

To replace the oven light bulb:

1. Turn electrical power off at the main source or unplug the range.
2. Press wire holder to one side to release the glass shield.
3. Replace bulb with a new 40 watt appliance bulb.
4. Replace glass shield over bulb and snap wire holder into place.
5. Turn power back on again at the main source (or plug the range back in).
6. The clock will then need to be reset. To reset, see **Setting the clock** and **minute timer** in this Use & Care Guide.

CAUTION

Be sure the range is unplugged and all parts are COOL before replacing oven light. Wear a leather-faced glove for protection against possible broken glass.

Problem	Solution
Poor baking results.	<ul style="list-style-type: none"> • Many factors affect baking results. Make sure the proper oven rack position is used. Center food in the oven and space pans to allow air to circulate. Allow the oven to preheat to the set temperature before placing food in the oven. Try adjusting the recipe's recommended temperature or baking time. If you feel the oven is too hot or cool, see "Adjusting Oven Temperature" section in this Use & Care Guide.
Appliance is not level.	<ul style="list-style-type: none"> • Be sure floor is level, strong & stable enough to adequately support range. • If floor is sagging or sloping, contact a carpenter to correct the situation. • Poor installation. Place oven rack in center of oven. Place a level on the oven rack. Adjust leveling legs at base of appliance until the rack is level. • Kitchen cabinet alignment may make range appear not level. Be sure cabinets are square & have sufficient room for appliance clearance.
Cannot move appliance easily. Appliance must be accessible for service.	<ul style="list-style-type: none"> • Cabinets not square or are built in too tightly. Contact builder or installer to make appliance accessible. • Carpet interferes with appliance. Provide sufficient space so appliance can be lifted over carpet.
Surface element too hot or not hot enough.	<ul style="list-style-type: none"> • Incorrect control setting. Be sure the correct control is ON for the element that you are attempting to use.
Surface element does not heat.	<ul style="list-style-type: none"> • Lightweight or warped pans used. Use only flat, evenly balanced, medium or heavyweight cookware. Flat pans heat better than warped pans. Cookware materials and weight of the material affect heating. Heavy & medium-weight pans heat evenly. Because lightweight pans heat unevenly, foods may burn easily.
Entire appliance does not operate.	<ul style="list-style-type: none"> • The time of day is not set. The time of day must first be set in order to operate the oven. See "Setting the clock" in the Setting oven controls section. • Make sure cord/plug is plugged correctly into outlet. • Service wiring is not complete. Contact your dealer, installing agent or authorized service agent. • Electrical power outage. Check house lights to be sure. Call your local electric company for service.
Oven portion of appliance does not operate.	<ul style="list-style-type: none"> • Be sure the oven controls are set properly for the desired cooking feature. See Setting Oven Controls in this manual or read the instructions "Entire appliance does not operate" in this checklist.
Oven light does not work.	<ul style="list-style-type: none"> • Be sure the light is secure in the socket. Also see "Changing & replacing the oven light" section.
Self-clean cycle does not work.	<ul style="list-style-type: none"> • Oven control not set properly. Follow instructions under Self-clean. • Self-clean cycle was interrupted. Follow steps under "Stopping or Interrupting a Self-cleaning cycle" under Self-clean.

Problem	Solution
Soil not completely removed after self-cleaning cycle.	<ul style="list-style-type: none"> • Failure to clean bottom, front top of oven, frame of oven or door area outside oven seal. These areas are not in the self-cleaning area, but get hot enough to burn on residue. Clean these areas before the self-cleaning cycle is started. Burned-on residue can be cleaned with a stiff nylon brush and water or a nylon scrubber. Be careful not to damage the oven gasket.
Oven smokes excessively during broiling.	<ul style="list-style-type: none"> • Incorrect setting. Follow broiling instructions in Setting Oven Controls. • Make sure oven door is opened to broil stop position. • Meat too close to the broil element. Reposition the broil rack to provide proper clearance between the meat & the element. Preheat the broil element for searing. • Meat not properly prepared. Remove excess fat from meat. Cut remaining fatty edges to prevent curling, but do not cut into lean. • Broiler pan and insert wrong side up and grease not draining. Always place grid on the broiler pan with ribs up & slots down to allow grease to drip into pan (some models). • Grease has built up on oven surfaces. Regular cleaning is necessary when broiling frequently. Old grease or food spatters cause excessive smoking.
Flames inside oven or smoking from oven vent.	<ul style="list-style-type: none"> • Excessive spillovers in oven. For example this will happen for pie spillovers or large amounts of grease left on the oven bottom. Wipe up excessive spillovers before starting oven. If flames or excessive smoke are present see "About broiling" in the Setting Oven Controls section.
Oven control panel beeps & displays any F code error (for example F10, F11, F13, F14, F15, F30, F31 or F90).	<ul style="list-style-type: none"> • Oven control has detected a fault or error condition. Press clear off to clear the display & stop beeping. Try the bake or broil feature again. If the F code error repeats, remove power from appliance, wait 5 minutes and then repower appliance and set clock for the time of day. Try the bake or broil feature again. If the fault recurs, record fault and call for service.
Scratches or abrasions on cooktop surface.	<ul style="list-style-type: none"> • Coarse particles such as salt or sand between cooktop and utensils can cause scratches. Be sure cooktop surface and bottoms of utensils are clean before usage. Small scratches do not affect cooking and will become less visible with time. • Cleaning materials not recommended for ceramic-glass cooktop have been used. See "Cooktop cleaning and maintenance" in the Care & Cleaning section of this Use & Care Guide. • Cookware with rough bottom has been used. Use smooth, flat-bottomed cookware.
Metal marks on the cooktop.	<ul style="list-style-type: none"> • Sliding or scraping of metal utensils on cooktop surface. Do not slide metal utensils on cooktop surface. Use a ceramic-glass cooktop cleaner to remove the marks. See "Cooktop cleaning and maintenance" in the Care & Cleaning section.
Brown streaks or specks on cooktop surface.	
Areas of discoloration with metallic sheen on cooktop surface.
